RE: Global Land Services

To Whom It May Concern:

I have served as Lands Lead for the Pacific Connector Gas Pipeline Project since the Phase I kickoff in January of 2006. The pipeline traverses some of the most rugged terrain in Oregon.

Centerline survey of the preferred route began in early summer of 2006. Global Land Services came on board and was responsible for the centerline survey of the Eastern portion 137 Miles (MP 86 to MP 223). As is the case with many projects, the decision to commence survey was long in coming and the deliverables placed upon Global had short time frames. Global responded with the men and equipment to meet the schedule and deliver an excellent product.

Global Land Services, Inc. has committed hours far above what anyone would expect in compiling and delivering the data gathered by numerous survey crews. Whatever has been required Global has responded and delivered.

I would recommend Global Land Services, Inc. for any and all of your survey needs.

Sincerely,

Dave Randall  
Field Lands Lead
